"Fall Detector For the Elderly" (FATE) - Final Workshop

Place

Aula Màster – Edifici A3 Campus Nord. Universitat Politècnica de Catalunya
Jordi Girona St., 1-3 08034 Barcelona, Spain

Time

9:30h-14:00h

Registration

<http://www.ticsalut.cat/fate--presentacio-de-resultats/>

The ultimate goal of FATE - FALL DeTector for the Elderly project is to widely validate an innovative and efficient ICT-based solution focused on improving the elder's quality of life by an accurate detection of falls in ageing people, both at home and outdoors.

The system is being tested and validated in 3 pilot studies involving real living scenarios, one in each of 3 different EU countries (Spain, Italy and Ireland), in close collaboration with the relevant public authorities. The pilot test previously selected 175 individuals with high risk of falling.

FATE is also a care model focused on strengthening Public and Private collaboration to reach a reliable service, paving the way across Europe for opening new market opportunities and benefits for all stakeholders in the health and care sectors, as well as sustainable models for the future elder generations.

AGENDA

09.00h Registration / *Registre*

09.30h Welcome / *Benvinguda*

09.45h Social dimension and impact of falls in older people (Andreu Català, CETpD Director and E-NO FALLS project coordinator)
